CAPABILITY STATEMENT

RESPOND GLOBAL

OUR PURPOSE

Respond Global aims to help both public and private organisations be better prepared and more capable of responding to disasters. During the initial phase of a disaster, response agencies are often confronted with an overwhelming need to protect life and property and it is unreasonable to expect that they can prioritise every high-risk or threatened entity.
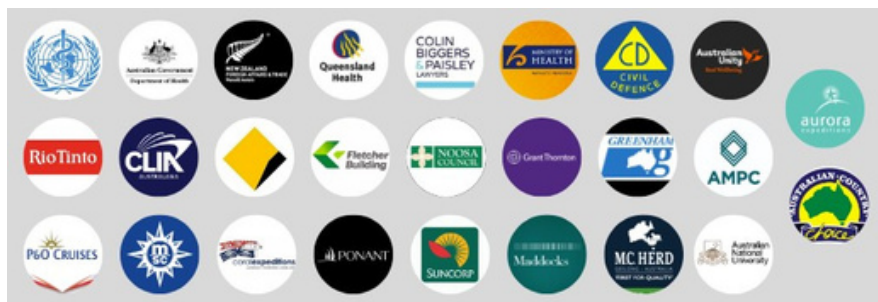

It is therefore critically important that organisations can effectively manage a disaster response in accordance with their own specific requirements and with the aim to minimize the impact on their workforces, communities, and economies.

Our approach to 'all hazards' disaster management, is based on real experience gained through time in the field, performing leadership and coordination roles during both domestic and international disasters of significance.

Our solutions are practical in nature and focused on building the capability of local response teams to better manage a disaster response for themselves. We utilise the breadth of our experience to deliver a service portfolio that starts with education, training and simulations, moves to advice, planning, and readiness, and culminates in response and logistics support during times of need.

ADAPTABLE SOLUTIONS

We provide internationally proven and practical health and disaster management solutions, that are scalable, adaptable, and fit for purpose. Whether the driver of risk is domestic or international, our adaptable solutions take the specific characteristics of the operating environment into account to determine how current response capabilities can be enhanced and developed, and how they will be accessed and sustained to deal with disasters.

+ Disaster & Emergency Management
All Hazards disaster planning and readiness support to build local response capability.

+ Public Health & Advisory Services
National, regional, and international medical, public health, and disaster management advisory services that set the standard for global best practices.

+ Rapid Response
Rapidly deployable response teams consisting of disaster managers, clinicians, and logisticians, to provide support or workforce surge capacity during times of disaster response.

+ Training & Simulations
All Hazards incident management training and simulations. From short tabletop simulations to the testing of national scale response systems, training and simulation ensure in-house response teams, systems, and processes are fit for purpose and well-rehearsed, ready when needed.

+ HELPR Program
Prioritising and empowering in-country disaster response capability amongst Pacific Island Countries, facilitated through our health and logistics support vessel HELPR-1.

EXPERIENCE WHERE IT COUNTS

Respond Global has been at the forefront of disaster management for many years, having been involved in leadership and coordination roles during both domestic and international disasters of significance such as the 2022 Victorian flood crisis, COVID-19 Pandemic, Black Summer bushfires, Measles outbreak in Samoa, Cyclone Debbie in Queensland, 2015 Nepal earthquake, 2014 West African Ebola outbreak, Typhoon Haiyan in the Philippines and the Black Saturday bushfires in Victoria.

Our experience as clinicians, hospital administrators, and disaster managers within the domestic and international context means we are well-positioned to assist our clients to better manage disasters that directly affect their facilities, workforces, and communities.

We provide frameworks, processes, and tools that directly interface with the broader emergency management frameworks administered locally. This outcome ensures not only a comprehensive and structured response to disasters specific to the requirements of each client but also one that is tightly coupled into the local emergency management arrangements, removing issues of misalignment or miscommunication of response activities.
